CUSTOM NEWS 2026/2027

News 2026/27

At Kalas, we are committed to continuously evolving our products to deliver the best possible cycling experience. We've spent the past year refining materials, construction, and design details to ensure every rider can benefit from improved performance and comfort.

For the 2026/27 season, we have focused on further developing our cycling bottoms range, bringing updates across shorts, tights and skinsuits to enhance fit, construction and overall ride comfort.

As cycling shorts are one of the most essential pieces of any rider's kit, we have placed a strong focus on their development, aiming to push comfort and performance even further. This evolution builds on proven foundations, maintaining the established fit and reliability of our products while refining key areas of comfort and durability.

Here's a summary of the main updates:

Updated Seam Construction

The bottoms platform transitions from flatlock to overlock construction delivering a cleaner look and improved long-term performance.

The new construction offers better stretch behaviour, improved durability, and a softer feel against the skin, helping to reduce friction during both long and intensive rides.

Optimised Chamois Integration

Chamois construction has been further refined through the use of different seam technologies depending on the riding purpose.

Endurance Anatomic and Project 3D chamois now use a zig-zag seam construction across all collections, allowing better movement adaptation and improved saddle contact, while reducing friction over long distances and improving durability.

Updated Chamois Platform

All chamois options have been refined to meet evolving performance demands, while maintaining their distinct role within the range.

Each chamois is developed in collaboration with Elastic Interface and designed to support different types of riding, from long-distance comfort to high-performance racing.

Endurance Anatomic pad

Designed for **maximum long-distance comfort**, the Endurance Anatomic chamois builds on the proven Endurance 3D construction, retaining its multi-density foam structure and anatomical shaping.

The updated design improves pressure distribution, ventilation, and overall comfort efficiency, while reducing bulk in low-impact zones to enhance long-ride performance without compromising support.

InFlow pad

Replacing Zoom X, the InFlow chamois offers a **versatile solution that balances comfort, performance, and reduced bulk**.

The refined construction improves stability through updated foam geometry, while smoother transitions and a soft, high-stretch top layer enhance saddle contact, freedom of movement, and moisture management.

Project 3D pad

Developed for **high-performance race use**, the Project 3D chamois builds on a proven concept for time trial and track positioning, now further refined with new materials and construction methods.

The updated design introduces a **3D printed insert** combined with traditional foam layers, improving airflow, moisture transfer and drying speed. As one of the early adopters of this technology, Kalas brings this advanced solution into its chamois range for improved comfort during high-intensity riding.

Extended Sizing

All new shorts and tights include size 0 across all adult models, expanding the size offering for smaller riders and ensuring better consistency across full kit combinations.

Skinsuits now introduce new sizing options, including sizes 0, 0+ and 7, across all adult models, while also offering a wide range of top and bottom size combinations. This allows riders to choose different sizes for the upper and lower part of the skinsuit, including standard and “+” options, with a maximum one-size difference between top and bottom for a more precise and flexible fit.

Refined Panel Construction

All bottoms feature a revised panel layout with a more anatomical shape.

The updated construction improves how the garment follows the body, enhancing comfort in the riding position and creating a cleaner, more refined silhouette.

PRO Bibs – Updated Bracer Construction

The PRO bibs feature a refined brace construction designed to improve comfort, stability, and durability.

The updated design enhances breathability, introduces more elastic straps, and delivers a cleaner, more structured appearance while maintaining freedom of movement during riding.

BIB SHORTS

Goffrato+

PRO

- High-performance race bib shorts designed to deliver a proven aerodynamic fit and long-lasting comfort during intense riding
- Updated construction improves durability and stretch performance through overlock seams, ensuring higher resistance and consistent comfort over time
- Refined panel shaping enhances anatomical fit and body contouring, allowing the shorts to follow the body naturally for better comfort in the riding position
- New elastic leg grippers provide a cleaner finish and more stable hold in position during riding
- Enhanced comfort and fit stability of the bracer system, including a double-layer rear panel, smooth elastic straps, and raised front section
- Available with Endurance Anatomic or InFlow chamois options to suit different riding needs, with the Endurance Anatomic version featuring a more elastic zig-zag seam construction for improved flexibility and reduced friction

Gravel

PRO

- High-performance bib shorts designed for gravel and long-distance riding, combining proven Goffrato bib shorts race fit with added mesh cargo pockets for practical on-bike storage
- Construction focused on durability and stretch performance through overlock seams, ensuring higher resistance and consistent comfort over time
- Panel shaping enhances anatomical fit and body contouring, allowing the shorts to follow the body naturally for better comfort in the riding position
- Elastic leg grippers provide a cleaner finish and more stable hold in position during riding
- Comfort and fit stability of the bracer system are supported by a double-layer rear panel, smooth elastic straps and a raised front section
- Available with Endurance Anatomic or InFlow chamois options to suit different riding needs, with the Endurance Anatomic version featuring a more elastic zig-zag seam construction for improved flexibility and reduced friction on long rides

SKINSUITS

Skinsuits

PRO / ELITE

All PRO and ELITE skinsuits, including PRO Brios, PRO Verano, PRO Shiro and ELITE Lycra Power, ELITE Revolution, feature an updated lower section aligned with the 2026/27 bottoms platform, while maintaining the established fit. The upper part of the skinsuit remains unchanged.

- Improved fit and body contouring, with anatomical panel shaping that allows the suit to follow the body naturally for better comfort in the riding position
- Updated construction improves durability and stretch performance through overlock seams, ensuring higher resistance and consistent comfort over time
- New sizing options, including size 0, 0+ and 7, with the ability to combine different sizes for the upper and lower part of the suit within one size difference for a more precise fit
- Available with new Endurance Anatomic or InFlow chamois options to suit different riding needs, with the Endurance Anatomic version featuring a more elastic zig-zag seam construction for improved flexibility and reduced friction
- Proven upper construction retained, ensuring consistent fit, performance and comfort
